Hi, everybody. Thank you for visiting this event today. I will tell you about the best place to locate such trees.

We believe that the location of these fluorescent trees should attract people who love and know history. Also, in addition to the fact that people will go to historical places more, they will learn more.

And since our trees are fluorescent and make a certain impression on people, the information given out by the trees will be better remembered.

Since our theme is more focused on information about war heroes, we can say that it is better to locate the trees in historical places, for example in Volgograd. There we may already see a famous memorial complex dedicated to the battle of Stalingrad, which lasted 200 days. Another possible location – in Moscow region, namely in Dubosekovo, where there is a memorial to "Panfilov Heroes".

The most convenient places for the implementation of our project are mainly places of memory of heroes, war events.

Thanks to our trees, people who know almost nothing about our heroes, but at the same time express a desire to learn, will be able to come and learn much from the trees, which will tell them the stories of war time.
